IA-PUC astro-ph history: A statistical analysis of the last ~6 years

Felipe Gran @fegranm fegran.github.io

Disclaimer:

This presentation will show the analysis of publicly available data through the last 2194 days (or ~6 years) and will not contain personal opinions.

Your feedback in this analysis is welcome and valuable. Please ask any questions you want :)

Motivation:

Interesting (at least for me) dataset that can contain trends and habits of the daily astro-ph.

My astro.puc mail contains more than 13500 mails (32 sent) which 1400 comes from the astro-ph.

It is a challenging data analysis due to inhomogeneities.

Hola todos,

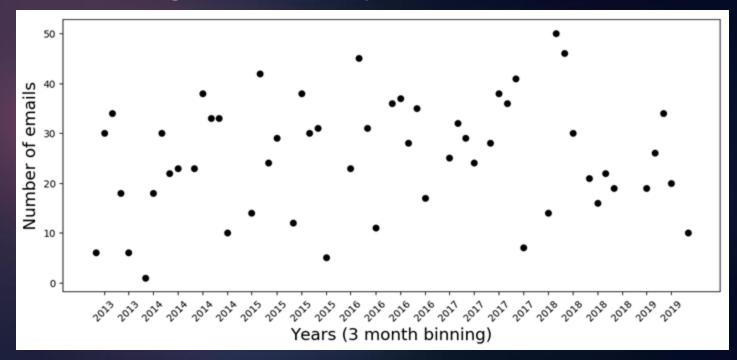

Astro-ph tomorrow will include two papers. There is space for another paper, please let me know if you are interested in presenting something.

Cheers, Mia

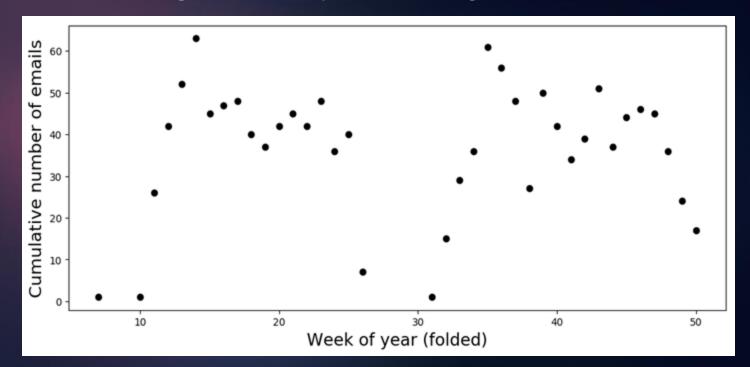

Particle-physics constraints from the globular cluster M5: Neutrino Dipole Moments <u>http://arxiv.org/abs/1308.4627</u> presented by: Nicolas Viaux

One more neighbor: The first brown dwarf in the VVV survey <u>http://arxiv.org/abs/1308.3216</u> presented by: Juan Carlos Beamin
